Powering vessels with Green Fuels

Zero Emission Shipping Fund

Accelerating transition to net zero

International
Chamber of Shipping

To make transition global, ZESF has two main purposes:

- **Provide rewards (feebates)** to ships using zero/near-zero GHG fuels (and technologies) to **reduce the cost gap** and incentivise the accelerated uptake of new fuels to achieve a “**take-off**” point by 2030 and de-risk investment decisions which are urgently required
- **Provide billions of US dollars** to support maritime GHG reduction programmes in **developing countries** via a separate **IMO (GHG) Maritime Sustainability Fund (IMSF)**, including production of new fuels and bunkering infrastructure in ports
